

Sakshi Mahesh Wadaskar

sakshisw29@gmail.com | Boston, MA | [Linkedin](#) | [Github](#)

SUMMARY

Software Engineer with 3+ years of experience, recently focused on production **AI agent** systems, **RAG** pipelines, **LLM** integration, and **evaluation frameworks**, using **Python** and **TypeScript/ React**. Hands-on experience with cloud-native architecture (**AWS, GCP**) and Infrastructure-as-Code, including a personal project spanning the full GCP serverless stack. Comfortable using **AI-assisted development** as a default way of working.

EDUCATION

Northeastern University

Boston, MA

MS, Computer Software Engineering

Web Development, OOP, Data Structures & Algorithms, Software Design Patterns, Advanced Big Data, Data Science

Vishwakarma Institute of Technology (VIT)

Pune, India

BE, Computer Engineering

Computer Architecture, Database Management System, Machine Learning, Artificial Intelligence (AI)

SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), Go, SQL, Java, C#, C/C++

AI Tools: Generative AI, Agentic AI, LLMs, RAG, LangChain, Vector Databases, Azure OpenAI, Prompt Engineering, Tool Use/Function Calling, AI-Assisted/Agentic Coding Tools

Frontend: React, Redux, State Management, Hooks, Angular, AG Grid, HTML5/CSS3

Backend & Frameworks: FastAPI, Node.js, RESTful APIs, OAuth 2.0/JWT, GraphQL, Flask, Spring Boot, Spring MVC, JPA

Cloud & DevOps: GCP (Cloud Run, Cloud Functions, GKE, BigQuery, Cloud Storage), AWS (Lambda, S3, EC2), Docker, Kubernetes, Terraform, CI/CD (Jenkins, GitLab)

Data & Databases: PostgreSQL, MySQL, Redis, Kafka, MongoDB, ETL Pipelines, Pandas, NumPy, Performance Tuning

WORK EXPERIENCE

Saayam For All

Washington, DC (Remote)

Full Stack AI Engineer

02/2026 – Present

- Architected a multi-agent **AI** routing system using **BART** classification to orchestrate **OpenAI** and Gemini **LLM** calls via function calling, reducing query latency by **85%**.
- Built an **LLM** evaluation framework benchmarking **630+ tokens/second** throughput, applying **prompt engineering** to optimize agentic AI quality and reliability in production.

Annaly Capital Management

New York, NY

Software Engineer

01/2025 – 12/2025

- Refactored **18+ Flask** microservices with **OAuth 2.0/JWT** standardization via **API Gateway** and centralized **ELK Stack** logging to expose mREIT trades as **REST** endpoints, cutting system debugging time by **35%**.
- Built an on-prem **document AI** pipeline using **OCR** (ocrmypdf), **LangChain**, and a **vision-model fallback** to extract structured trade data from PDF deal confirmations, adding **runtime guardrails** to flag invalid trade data and out-of-bounds values, achieving **99%+ field accuracy** with **65% less manual entry**.
- Architected a **distributed**, event-driven system at scale for repo collateral margin calculations and mREIT trade processing using **Python** and idempotent **Kafka** consumers, sustaining **99.99%** uptime under high-volume production load.
- Reduced **API latency by 40%** for 3TB+ trade pricing datasets via **PostgreSQL** indexing and **Redis** caching with an append-only log architecture.

Thoughtworks (Global Technology Consultancy)

Pune, India

Software Engineer

04/2022 – 08/2023

- Designed serverless **microservices** on **AWS Lambda** for inventory management and **ETL** data-compaction flows, cutting infrastructure costs by **25%** via event-driven architecture.
- Led **technical discovery sessions** with clients to translate stakeholder requirements into functional designs, increasing **SDLC** velocity.

Thoughtworks (Global Technology Consultancy)

Pune, India

Graduate Software Engineer

04/2021 – 04/2022

- Accelerated **React/TypeScript** bundle performance via code splitting and memoization, cutting load times by **55%** for **50K+** global users.
- Enhanced e-commerce UI responsiveness by implementing windowed rendering with **react-window** and optimizing **GraphQL** data-fetching, reducing client-side latency by **32%** across high-traffic product pages.

PROJECTS

Automated Financial Intelligence & Valuation Platform | Python, React.js, FastAPI, Claude SDK, RAG | [Live](#)

- An AI analytics platform for financial document intelligence. Built a **RAG** pipeline using **LangChain** and **Anthropic Claude SDK** over unstructured financial data via **FastAPI** backend, replacing manual auditing workflows.

Serverless Real-Time Event Processing & Analytics Pipeline | Node.js, GCP (Cloud Run, Functions, GKE, BigQuery, Storage)

- Built a serverless **API** on **Cloud Run** to ingest live data into **Cloud Storage**, triggering **Cloud Functions** and **GKE** worker pods to transform data into **BigQuery** for analytics.
